Doghobble - Leucothoe fontanesiana	Native					Coming Soon ...			

Our Definition of Quality

Pruning

We keep our plants pruned BUT not over-pruned. Bushes and small flowering trees pruned often, large and shade trees are not pruned often. this result in a much healthier and stronger plant although it lengthens the production time

Root Pruning

We To produce a stronger and healthier tree, we constantly Prune the root system. We sell healthy plants not big caliper plants

Clear Trunk

5' Clear trunk. It lengthens the production time but makes the tree much more beautiful when its in the ground

Pesticide & Fungicide

We have developed a routine schedule to apply any chemicals that are needed BUT only if needed. We are proud to not over use any chemicals. None of chemicals we use is restricted and almost all food safe

Water

We test our water every 3 months for hardness and PH level

Soil

We test our soil every 3 months to assure nutrient and PH level

Fertilizer

We test our foliage for nutrient every 3 months. combine that data with soil and water, we order a special blend of fertilizer
